

EHDA

European Health Data Alliance e.V.

INTRODUCING EHDA

Introducing the European Health Data Alliance

● Building Bridges and Fair Data Ecosystems

We connect research, industry, and society to build fair, inclusive health data ecosystems. As a not-for-profit, we drive citizen-centered health data spaces across Europe, fostering collaboration and innovation.

● Empowering Data Sovereignty, Compliance & Literacy

We give citizens control over their health data, ensuring transparency, EHDS compliance, and digital literacy - so everyone can trust and benefit from their data.

● Driving Digital Health Innovation & EHDS Use Cases

We foster cutting-edge, EHDS-compliant solutions and set best practices to accelerate innovation, aiming to deliver the first cross-border health data use cases by 2030.

Data Space Experience

- Focus on connecting health data with wellness data
- Four use cases

- Focus on interoperability of care and health services
- Two use cases

- Focus on AI applications
- Six use cases

Our Vision and Mission

Vision

A responsible, human-centered, and innovative European digital health data ecosystem where health data is used fairly, sustainably, and for the benefit of society.

Mission

By 2030, EHDA e.V. enables EHDS-compliant use of health data by strengthening digital skills and providing a platform that connects research, industry, and society to build a trusted, networked data world together.

Areas of Focus of EHDA

1. Self-Determination & Data Sovereignty

We empower citizens to exercise self-determination over their health data and create transparent, EHDS-compliant usage opportunities both nationally and internationally.

2. Inclusive Data Ecosystems

We bridge the gap between primary and secondary use of health data, enabling all stakeholders - from individuals to large organizations - to engage in fair, secure, and self-determined data usage.

3. Innovative Use Cases

We develop and promote practical use cases that advance EHDS-compliant data usage and deliver measurable value for society, the economy, and research.

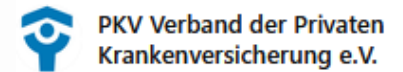

4. Funding Common Good Objectives

We secure sustainable funding from public and private sources to act as an independent navigator within the EHDS, representing the interests of citizens, society, the economy, and research.

5. Inform European Decision Making

We advocate for an end-to-end perspective on health data that combines self-determination, data protection, and political visibility - for a digital health future in Europe.

Data Services (by members)

Layers in the Data Space

Join the European Health Data Alliance

Turning strategy into action

- | | | |
|----------|--|--|
| 1 | Advance trusted data spaces | EHDS-compliant technologies and secure processing environments |
| 2 | Connect health data infrastructures | Stronger primary and secondary data use across care and research |
| 3 | Enable collaboration at scale | Partnerships, knowledge exchange, and implementation across Europe |

Projects & Networks

Thank you for your attention!
